PROFILE

Offensive Security Researcher & Systems Engineer with **8 years of continuous open-source contribution** (1,600+ commits in 2025). Skilled in **low-level programming (C/ASM/Rust)**, OS architecture, and **Offensive Security**. Creator of the **BerserkArch** Linux distribution. Bridging the gap between Kernel-level Engineering and Full-Stack App Development.

TECHNICAL ARSENAL

Core Languages C, C++, Assembly, Rust, Golang, Python, Bash, Zig, JavaScript, TypeScript, Java.
Systems Engineering Kernel Dev, Memory Management, Bootloaders, Device Driver Development, Embedded/IoT.
Full-Stack Dev Frontend (React/Next.js/Astro.js), Mobile (Android/IOS), Desktop Apps, Backend, Automation, APIs.
Cloud & DevOps AWS (SES, EC2, S3), GCP, Terraform, Vagrant, Kubernetes, Docker, Github Actions, CI/CD, Linux.
AI & LLM Security: LLM Fine-tuning, Prompt Engineering, Neural Networks, Data Analysis, Model Red Teaming.
Red Teaming & Pentesting Reverse Engineering, Network/Internal/Web Penetration Testing, C2 (Cobalt Strike/Sliver).

SECURITY & ENGINEERING EXPERIENCE

BerserkArch Linux Distro Project <i>Lead Maintainer, Developer & Systems Architect</i>	Remote <i>2025 - Present</i>
<ul style="list-style-type: none">Distro Architecture: Designed and actively maintain an Arch Linux-based distro for Red Team Operations & Dev.Release Engineering: Built a fully automated CI/CD pipeline using GitHub Actions and Docker to build ISOs, verify checksums, and deploy to multiple mirrors (SourceForge, R2, Torrent) without human intervention.Containerization: Maintain official Docker images on Docker Hub, enabling rapidly deployable security environments.Security Hardening: Added custom kernel patches and pre-configured AppArmor profiles to ensure security for users.	

Cybercraft Labs Pvt Ltd <i>Founder & Principal Engineer (Security Consultancy)</i>	Patna, Bihar <i>Sept 2023 – Nov 2024</i>
<ul style="list-style-type: none">Agency Leadership: Founded and operated an independent security consultancy, managing client lifecycles from technical consultation to delivery of penetration testing and cloud security solutions.Cloud Architecture: Managed hybrid cloud infrastructure (AWS/GCP) for clients, configuring secure transactional mail servers using AWS SES (SPF/DKIM/DMARC) and hardening EC2 instances.Software Development Developed full-stack web applications, desktop tools, and custom reconnaissance automation (Python/Go), optimizing client workflows and reducing manual testing time by 40%.	

KEY R&D PROJECTS

THBOS (Custom x86 Kernel) <i>Source Code</i>	<i>Systems Programming (C, Assembly & Zig)</i>
<ul style="list-style-type: none">Kernel Dev: Wrote a 64-bit OS kernel from scratch, implementing a custom bootloader to switch from Real Mode to Protected Mode.Hardware Interaction: Directly manipulated CPU registers to use CPUID instruction set to fetch processor topology.	
CarePulse <i>Live App</i> <i>Source Code</i>	<i>Healthcare Platform (Next.js, TypeScript, Appwrite)</i>
<ul style="list-style-type: none">Full-Stack Engineering: Architected a HIPAA-compliant patient management system with complex form validation (Zod), Next.js Server Actions and SMS notifications (Twilio).System Design: Built a scalable backend with admin panel with Server Actions for secure data handling.	
Chip8 Emulator <i>github.com/thehackersbrain/chip8</i>	<i>Systems Emulation (Rust)</i>
<ul style="list-style-type: none">Emulation Logic: Built a fully functional CHIP-8 emulator in Rust, implementing the fetch-decode-execute cycle and stack management.Memory Safety: Leveraged Rust’s borrow checker to ensure memory safety while handling raw bytecode execution.	
HiddenWave <i>github.com/thehackersbrain/hiddenwave</i>	<i>Steganography Tool (C++ & Python)</i>
<ul style="list-style-type: none">Bit Manipulation: Implemented Least Significant Bit (LSB) encoding algorithms in C++ to hide encrypted payloads inside WAV/MP3 audio.	

ACHIEVEMENTS & CERTIFICATIONS

- VulnHub Author:** Architected 2 official vulnerable VMs (*Blogger, CorpVision*), designing custom exploit chains involving Webmin and Cronjob privilege escalation.
- Advanced Security Labs:** Completed **HackTheBox Fortresses** (Jet) & **TryHackMe Networks** (Wreath, Holo), mastering pivoting, AD exploitation, and perimeter breaching.
- Global Rankings:** **Top 1% on TryHackMe** (CTF) | **HackerRank Gold Badge** (Problem Solving & Algorithms).
- Certifications:** Certified proficiency in **Computer Forensics, Malware Analysis, and Active Directory Security** (Udemy/Independent Coursework).

EDUCATION

B.Sc (Maths Hons) <i>Specialization:</i>	<i>Patliputra University, Patna</i> <i>Advanced Mathematics (ie. Calculus, Linear Algebra)</i>	3rd Year, (Pursuing) -
